ABSTRACT

In October 1990, a study was conducted of Miami-Dade Community College (M-DCC) occupational programs over the 5-year period from 1984-85 through 1988-89. The study examined trends in enrollment, graduation, attainment of state-mandated job placement standards, and pre-program interest among students for both Associate of Arts (A.A.) and Associate of Science (A.S.) degrees. The opening three sections of this report provide summary information on the placement status of 1988-89 graduates; the distribution of A.S. programs on M-DCC campuses; and the graduation and enrollment trends in each of the different occupational programs. The final section consists of extensive data tables for each of the A.S. programs, providing information on total program enrollees, numbers of graduates, number of graduates employed in a related field, number continuing their education, number employed in an unrelated field, number in the job placement pool, number placed, and the number originally declaring enrollment in an A.A. or an A.S. program. Data are provided for each of the 5 academic years from 1984-85 through 1988-89. Highlighted findings for 1988-89 include the following: (1) the overall job placement rate for graduates of A.S. programs was 96.8%; (2) 85% of the A.S. programs had graduates who were continuing their education; (3) only 3% of the graduates were employed in fields unrelated to their training; and (4) the programs with the largest numbers of graduates were Nursing, Office Systems Technology, and Electronics Technology. Synopsis of the Report

This report presents data on individual Miami-Dade Community College occupational programs over a period of five years, from 1984-85 through 1988-89. The data show trends for enrollment, graduation, placement standard attainment, and preprogram interest for both A.A. and A.S degrees. Most of these program data are reported to the Florida State Board of Community Colleges and are considered in program review decisions. Placement data are an integral part of the on-going State program review process.

Some highlights of the report include:

*The overall placement rate for 1988-89 graduates of Associate in Science programs is 96.8%.

*All A.S. programs which had graduates met the State 70% placement criterion; most programs far exceeded the standard.

*In 85% of the A.S. programs with graduates, some graduates were found to be continuing their education. A number of high continuing education rates are for programs with Associate in Arts counterparts. Students often complete curricula qualifying them for both degrees.

*A substantial percent of A.S. graduates are continuing their education in ten programs:

63% Interior Design Technology
60% Graphic Arts Technology
60% Radio & TV Broadcast Programming
42% Banking & Financial Institutions (Financial Services)
40% Early Childhood Education
39% Travel Agency Management
38% Electronics Technology
37% Business Data Processing & Computer Programming
35% Business Administration & Management
30% Aviation & Allied Studies (Aircraft Piloting)

*Only 3% of the 1988-89 A.S. graduates were employed in fields unrelated to their training.

*The ten programs with the largest number of enrollees for 1988-89 are:

877 Business Administration & Management
593 Business Data Processing & Computer Programming
585 Office Systems Technology
487 Electronics Technology
475 Nursing - ADN
282 Legal Assistant
231 Nursing - Transitional
225 Aviation & Allied Studies (Aircraft Piloting)
223 Early Childhood Teacher Education
214 Fire Science Technology

*The eleven programs with the largest number of graduates for 1989-90 are:

107 Nursing - ADN
85 Nursing - Transitional
70 Office Systems Technology
62 Electronics Technology
54 Business Data Processing & Computer Programming
53 Basic Law Enforcement
50 Business Administration & Management
47 Dental Hygiene
45 Early Childhood Teacher Assistant (Child Dev & Educ)
30 Radiologic Technology
30 Vision Care Technology

*Of the 51 programs active in 1988-89, 16 (31%) are medically related.

*Of the 35 nonmedical programs, 23 (66%) are campus exclusive (1 on South, 5 on Wolfson, 17 on North).

*Of the remaining 12 nonmedical programs, 7 (20%) are offered on both North and South campuses; 5 programs (14%) are found on North, South, and Wolfson. There are no programs offered on all M-DCC campuses.

Program Review:
A Five Year Summary of
Placement and Follow-Up Information
Of Students in Associate in Science Degree Programs
(1984-85 Through 1988-89)

The purpose of this report is to examine the progress of students enrolled in Miami-Dade Community College (MDCC) occupational programs over a period of five years. Associate in Science programs are monitored by standards set by the Florida state legislature. Criteria applied are directed at accountability to the student, community, and taxpayer. For a description of the three levels of the program review process, see Program Review: A Longitudinal Study of Associate in Science Degree Programs, 1983-84 Through 1988-89 (Research Report No. 89-26R). Positive results for program graduates are interpreted to be: 1) Employment in a job related to the field of training or 2) Continuing education. The graduate is considered to have been successfully placed if either outcome ensues. Follow-up or tracking of students to determine placement is an integral facet of the program review process. At the program level, a placement rate of 70% for graduates meets minimal State program review standards. Program enrollment data are also reported to the State and are included in the present paper to highlight trends.

Placement Status of 1988-89 Graduates

Table 1 summarizes the placement status of the 1988-89 graduates from A.S. programs. Four separate Nursing-ADN programs are shown in Table 1 but for State reporting purposes, all are aggregated as noted. Two Planned Certificate programs are included in the table because their performance is also monitored by the State. Many changes of program title have occurred. New titles are used in this table if they resemble the old title. Where title changes bear little resemblance to their former titles, the new titles are enclosed in parentheses. The one factor that has remained stable in A.S. degree occupational programs is the Miami-Dade program code. To

preserve program identity across changes, these program codes are referenced.

The pool of 902 completers omits nonresident alien (NRA) graduates for they normally return to their country of origin and are difficult to track. The pool also omits graduates who could not be located, despite concerted effort. This is the first time the placement pool comprises only those graduates who could be located, and the placement rates for the 1988-89 graduates are thus at an all time high. The current placement rate equation follows:

$$\text{Placement Rate} = \frac{\text{No. in Related Job} + \text{No. Continuing Education}}{\text{Completion Pool (omits NRA \& unknowns)}}$$

As an entirety, 79.8% of the M-DCC 1988-89 A.S. graduates were in related employment and 17% were continuing their education for a total placement rate of 96.8%. Though the A.S. degree is employment rather than baccalaureate oriented, in 85% of the programs with completers, some graduates are continuing their education. Substantial proportions of the graduate pool were found continuing their education in ten programs:

63% Interior Design Technology
60% Graphic Arts Technology
60% Radio & Television Broadcast Programming
42% Banking & Financial Institutions (Financial Services)
40% Early Childhood Education
39% Travel Agency Management
38% Electronics Technology
37% Business Data Processing & Computer Programming
35% Business Administration & Management
30% Aviation & Allied Studies (Aircraft Piloting).

Several of the A.S. programs with high continuing education rates are programs with Associate in Arts counterparts. Students complete curricula qualifying them for both degrees. In 1988-89, 116 multiple degrees were

awarded. Advantages accrue from dual degree achievement -- preparation for the baccalaureate degree simultaneous to job preparation.

Most of the A.S. programs that met the State's standard in 1988-89 far exceeded the minimum 70% required. An all-time high placement rate of 89.3% occurred last year with the 1987-88 graduates. This rate would have been 94.8% were graduates with unknown status omitted from the placement rate calculation. In 1988-89, the aggregated program placement rate is even higher --- 96.8%. For the past two years, the addition of state community college data to search for graduates who are continuing education has helped to boost the placement rate. Two new sources of placement data supplied by the Florida State Department of Labor for the 1988-89 A.S. graduates were information on former M-DCC enrollees working in the U.S. Postal Service and information on those employed by the U. S. government. Only 3% of the 1988-89 graduates were employed in occupations unrelated to their field of training.

As a group, the graduates in the health programs have been easiest to locate and the most responsive to inquiries about their employment status, even before the State imposed its criterion. Health programs, again, surpassed the already high aggregated placement rate with most programs showing 100% placement. The contractual programs (Basic Law Enforcement and Fire Science Technology) were outstanding in their placement rates primarily because program enrollees are already in related jobs. The new Postsecondary Adult Vocational programs (PSAV) will be monitored by the Florida State Department of Education and so will appear in subsequent program review reports issued by Institutional Research.

There were only five programs not meeting the 70% criterion in 1988-89 (Table 2). All of these programs had zero graduates and, therefore, no opportunity for placements. Many of these latter programs have normally graduated no one. The State will shortly be focusing its efforts on programs having low enrollments and/or zero completions.

Distribution of A.S. Degree Programs on M-DCC Campuses

Table 3 displays programs exclusive to each campus. There are 23 nonmedical Associate in Science programs where facilities and faculty are concentrated on one campus. South Campus has 1 exclusive program (Landscape Development), Wolfson has 5, and North Campus has 17. These latter seventeen programs represent a broad diversity of disciplines.

Table 4 shows multi-campus programs. Seven programs are offered on both the North and South Campuses. Five programs are offered on North, South, and Wolfson; four of these five programs are in fields having more generic employment opportunities. There are no programs offered on all M-DCC campuses.

Overview of Occupational Programs

Tables 5-55 present program review data for each of the Associate in Science degree programs at Miami-Dade Community College. Two Planned Certificate programs included are Law Enforcement and Pharmacy Technician. Variables shown give an indication of the interest in an occupational program across a span of five years (1984-85 through 1988-89). The program review tables contain campus specific data for only those programs that are offered on more than one campus. Where programs are solely offered on one campus, college-wide data are identical to campus data.

For programs that are offered on multiple campuses, the College-wide totals indicate home campus registrations rather than course campus registrations. Trends can be seen among key variables for each program. A stable identifier, Miami-Dade program code, provides an accurate means of identifying a program across years as program titles have changed.

Definitions of the variables in these tables follow:

Graduation Year - the State Report Year data from spring, summer, fall, and winter (e.g. 87-3,87-4, 88-1, 88-2).

Program Enrollees - the State Report year count of students who have declared the program and earned at least 15 credit hours excluding College Preparatory and English as a Second Language courses.

Graduates - all persons awarded an Associate in Science degree or Planned Certificate.

Employed Related - graduates who were hired for jobs in which their training skills and knowledge are being utilized.

Continuing Education - graduates who have returned to study in an institution of higher learning. Those in private or out-of-state universities are, for the most part, excluded from the count.

Unrelated Employment - data come from two sources: 1) self-reported information by the graduate or 2) program code/ industry code non-match.

Status Unknown - graduate could not be located in spite of intensive search of many sources.

Placement Pool - total number of completions excluding non-resident alien (visa) graduates and for 1988-89, exclusion of "status unknown" graduate.

Fall Term Student Declaration of Major - Fall term enrollees who declare that they are in the program. They may not all currently meet the credit requirement of a program enrollee. If an Associate in Arts program counterpart exists, those enrollment declaration totals are also given. The related A.A. program is listed at the foot of the table.

Highlights of Individual Programs

Patterns over the past five years can be seen for each Associate in Science degree program. Tables 5-55 give detailed data for specific occupational programs in alphabetical order by program title. While the State no longer includes in the placement pool those graduates who could not be located, the data will continue to be displayed. A few programs tend to have higher unknown rates than the norm and some effort will be directed at reducing the number.

The first of the occupational programs detailed in this report is Air Conditioning, Refrigeration & Heating Systems Technology (Table 5). This program has declined in both enrollments and completions. In three of the five years of the state's imposed 70% minimum success criterion, the

program has met standards. There is no A.A. degree counterpart to this program.

The Allied Health Technology Enhancement Studies program (Table 6) is new and has no placement data to report.

Table 7 gives data for Architectural Technology. Enrollments over five years have fluctuated between 33 and 49. There are few graduates from this program. In the latest year, all graduates were successfully placed. A.A. student declarations for this program rose above previous levels in 1988-89.

Aviation and Allied Studies (Aircraft Piloting and Navigation, Professional Pilot Technology), Table 8, shows a 139% growth in enrollments over five years. This enrollment increase is due to the addition of this program on North Campus in 1987-88, and to the Pilot Entry program on South Campus. Graduation rates are also increasing. Placement standards were met in four of five years. Substantial numbers of A.S. and A.A. students show interest in this program as potential majors.

Table 9 gives Aviation Maintenance Technology data. Enrollment increases are attributed to the establishment of this program on the South Campus. The number of graduates continues to be single digit. Placement success occurred in four of five years. A.A. intent has dropped markedly (-68%) in the past two years. This decline was offset to some extent by the A.S. intent declaration increase.

Banking & Financial Institutions or Financial Services (Table 10) is at a five year low in enrollments. The number of graduates has remained steady in the last three years. Four of five placement rates have met criterion. Fall Term declarations for this program have dropped correspondingly. Nationwide developments in the financial industry appear to impact enrollments. The A.A. counterpart is generic (Business Administration) and therefore an unclear indicator of interest for this specific program.

Basic Law Enforcement or Law Enforcement (Table 11) is one of two Planned Certificate programs under State criterion. Since its first

certification class in 1985-86, this program has had a high completion rate. Placement rates have consistently been close to 100%. Enrollment and completions data for 1987-88 and 1988-89 are under-reported. This program is in a transitional state and college electronic file programming is being set up to receive these data. Law Enforcement will henceforth be designated as program code 7U, Vocational Credit Certificate. Criminal Justice administration, its A.A. correlative, has had a pattern of high student interest, averaging 528 declared majors per Fall Term.

Building and Construction Technology (Table 12) had approximately 45 enrollees each year for the past five years. Roughly one out of ten of the students in this program graduates. Placement rates have met standards in only one out of five mandated years. This field is sensitive to economic and cyclical changes. Declarations for both associate degrees generally parallel actual enrollments.

Business Administration & Management (Table 13) is one of Miami-Dade's largest programs for both the A.S. and A.A. degrees. The huge increase in A.S. enrollments in recent years is due mainly to the consolidation and streamlining of related programs. For example, when the accounting program was retired, the enrollees were channeled into Business Administration. An increase in the number of graduates is perhaps also due to consolidation.

Business Data Processing, now called Computer Information Systems Analysis (Table 14), is another of M-DCC's leading programs. While still large, counts have dropped for actual program enrollees and A.A. declarations. The number of graduates in 1988-89 is lower by one person than five years ago. Placement rates have met criterion in four of five years. Approximately one-fourth of program graduates were continuing their education for the last two cohorts. Since an A.S. degree has job preparation as its objective, a number of graduates may have obtained dual degrees. This is another field where state-of-the-art competencies enable concurrent financial support for upper division study.

Though the Chiropractic Technician 2 program (Table 15) is new, it already has a graduate and this person was placed successfully.

Civil Engineering Technology (Table 16) had a low range of enrollments and declarations (12-34) over the past five years. However, its A.A.-related program shows a tenfold larger enrollment intent. For most years, this program has had no graduates.

The enrollments of Commercial & Industrial Photography, now called Photographic Technology (Table 17), have increased by 100% in five years. Graduation numbers are small but doubled to four in 1988-89. A successful placement rate was achieved for the last two successive years.

Table 18 gives data for Commercial Art and Advertising Design (Graphic Design Technology). The number of enrollments for this program has remained relatively stable (approximately 90) for five years. Stability is also seen for A.S. and A.A. declarations. The size of the pool of interest would tend to lead one to feel somewhat "safe" about prospective students moving into the program. Placement rates have been above 70% for four of the five years of State requirements.

The Court Reporting Technology program (Table 19) has grown in enrollments by 117% in five years. There is a mean of 3 graduates per year as compared to over 100 enrollees per year for the past 3 years. Leavers (attrition) data for this program do not reveal a high percent of in-field employment. For four of the five years, the 70% placement criterion was met. There is no direct correspondence of this A.S. degree program with any A.A. degree program. The most appropriate related A.A. program is the generic Business Administration program. Several other A.S. programs with unique curricula are similarly categorized for the related A.A. major declaration.

For the Criminal Justice Technology program (Table 20), enrollments are fairly stable across time but graduations have declined in recent years. The 70% placement criterion was met in three of five years. Among the 1987-88 graduates, 43% returned to educational institutions. This

program lends itself to dual purpose objectives for both employment and baccalaureate goals. There is strong A.A. declaration (in the 500's) for the criminal justice field.

The enrollments for Dental Hygiene Technology (Table 21) have remained relatively stable. After a severe drop in number of graduates during 1985-86, recovery is occurring. Placement rates have been high for all years. Were it not for the unknown status of its graduates for 1986-87, all placement rates would be close to 100%. The declaration of major intent by students for this program has been steady. A related program, Dental Laboratory Technology and Management (Table 22), was recently established and already has one graduate for a 100% placement rate.

Enrollments for Dietetic Technician (Table 23) fluctuated between 28 and 40 in five years. There is a mean of 5 graduates from this program per year. Placement rates were above criterion for 4 of 5 years. When the number of graduates is very small, as in 1985-86, calculation of placement rates gives a distorted impression. Declarations for either the A.S. or A.A. degree are generally on a par with actual program enrollees.

Table 24 gives data for Early Childhood Teacher Education (Child Development and Education). Program enrollees and declarations for both A.S. and A.A. degrees have increased substantially over a five-year period. A mean of 30 graduates per year gives this program an unusually high graduation to enrollment ratio (1:6). High placement rates exist for this program. The apparently low rate in 1986-87 was due to the large number of graduates who could not be located. In 1987-88, 58% of graduates continued their education beyond the associate degree. In 1988-89, 39% of these graduates were continuing their education. Associate degree graduates in childhood education perform well in the State University System.

Electrical Distribution Technology or Power Generation and Distribution Technology (Table 25) has a low number of enrollees and graduates over the years. Placement rates swing sharply between zero and one-hundred percent. The A.A. related enrollment declarations (Electrical Engineering), indicate very strong interest in the major.

Electroencephalographic Technology (Table 26) has a mean of 10 enrollees and 3 graduates per year. When the number of completions is small, the placement rates oscillate wildly from year to year. The closest A.A. degree related program, Medical Technology, has a fair number of students declaring interest.

Electromechancial Technology or Computer Integrated Manufacturing (Table 27) shows a decrease in enrollments over a five year period. The solitary completer in each of the earlier years has found employment in-field. In 1988-89, there were two graduates in the placement pool and they were both successfully placed. The A.A. counterpart, Mechanical Engineering, has a substantial number of potential student declarations across years. It is difficult to know, particularly with engineering programs, which program the student will ultimately declare for a major at graduation; declaration shifts are unpredictable from term to term. These shifts may be indicative of the student's own uncertainty of major or desire to sample other programs.

Electronics Technology (Table 28) is one of the A.S. programs at M-DCC with the largest enrollment. Its size by declaration of intent for the A.S and A.A. is even more substantial. This program ranks among the largest for number of students graduating from M-DCC with an A.S. degree. The Electronics Technology program draws many nonresident alien students but for State reporting purposes, these graduates are omitted from the placement pool. Were it not for the unknown status of a number of its graduates, placement rates would have been consistently above minimum standards. For the 1987-88 year, nearly one-third of program completers were found to be continuing their education; in 1988-89 the continuing education rate rose to 38%. As with other engineering graduates, the likelihood of obtaining dual degrees and/or of furthering their education is greater than with many other A.S. degree programs.

Over a period of four years, Engineering Drawing and Design Technology (Table 29) shows a gradual decline in enrollments. In its best year, 1986-87, there were five graduates and the success rate was 80%.

Other years have been below the 70% standard, with no graduates for the past two years.

The Fashion Studies or Fashion Marketing Management program (Table 30) has grown in enrollment over the past four years. The number of completers is increasing and placement rates are also rising. The increases may be influenced by program consolidation efforts and by the expansion of Institutional Research sources for locating completers.

Fire Science Technology, now called Fire Fighting (Table 31) has been growing steadily in enrollees since 1985-86. State placement standards were met for all years. This program has no A.A. counterpart.

Funeral Service Education program (Table 32) has a mean of 105 students and 25 graduates per year over five years. The high ratio of completion to enrollments (1:4) may indicate that this is a program that one intends to complete once enrolled in its courses. In-field employment rates have been high for all years studied.

The 1988-89 Graphic Arts Science Technology (Table 33) enrollments are at the 1984-85 level. Completions range from 3-7 persons. Placement rates have been high for the past three years. The low rate for the two earlier years is due to the inability to locate graduates. For the most part, interest in the program as evidenced by Fall Term declarations, has fluctuated over a narrow range.

For the Hospitality Management program (Table 34), both actual A.S. degree enrollees and A.S. intent to enroll have declined over the years. In contrast, declarations for the A.A. major have risen. This student behavior may be influenced by the quality of the upper division transfer program at the local university and by the employment opportunities existing in management locally for those holding a baccalaureate degree. Placement criterion was met for all years.

The Interior Design Technology program (Table 35) showed a four year drop but recovered for both enrollees and graduates in 1988-89. The

state placement criterion was met for three years of the four years displayed. In the other two years in which criterion was not met, the unknown status of completers contributed heavily to that state. This program is dominated by females who may become homemakers or move out-of-state. This makes it difficult to determine placement outcomes. In 1988-89, 63% of the placement pool were found to be continuing education.

Land Surveying (Table 36) shows steady growth of enrollments for the past four years, from 11 to 33. Intent declarations are also at nearly the same levels. Lack of graduates since 1985-86 has resulted in zero percent placement. There is no related A.A degree program.

Landscape Development (Table 37) has grown in enrollments from 4 to 22 in the last five years. The number of graduates in this program ranges from 0-4. The placement criterion was met for the last two consecutive years.

Table 38 displays data for the Legal Assistant program. Since 1984-85, enrollments have more than doubled -- from 138 to 282. In the same period of time, the number of graduates has exactly doubled. Placement rates have exceeded the minimum 70% standard for all five years. There is a sizable pool of students declaring interest in this program.

The Medical Laboratory Technology program (Table 39) shows enrollment stability; a mean of 18 students graduate from this program each year. The placement criterion was met for all years under mandate. The number of Fall Term A.S. declarations has stabilized in the 90's. There has been a 27% drop of A.A. declarations since 1986-87.

The Medical Record Technology program (Table 40) reversed its growth trend in 1988-89 with a 24% decline in enrollments. The number of graduates per year has been somewhat erratic. For four of five years, the state placement criterion was well above minimum standard. In the one year in which the standard was not met, the principle contributor to that condition was the unknown status of graduates. While A.S. declarations are rising, A.A. intent is declining.

Nursing - ADN (Table 41) has consistently high enrollments, in the upper four-hundreds. This is one of the College's largest A.S. programs for both enrollments and graduations. Placement standards were substantially met in all years. Even though A.A. declarations have dropped 38% in five years, a sizable group declares an interest in nursing. A.S. declarations are also impressive.

Nursing ADN - Accelerated Option (Table 42) appears to be on firm foundation with respect to number of enrollments, graduations, placements and declarations.

Nursing ADN - Jackson (Table 43) is experiencing a marked decline in enrollments. Enrollments have dropped by 83% and declarations are down to a trickle. Graduations are likewise declining. State criterion was met in all four years. The Fall Term declarations for the A.S. degree are made up of students who enter Miami-Dade courses directly from clinical training at Jackson. Since 1986-87, the University of Miami has offered Jackson diploma holders immediate access to the university's baccalaureate degree program; tuition rebates are given to the graduate with a UM bachelor degree who works at Jackson Memorial Hospital. This agreement has had its impact.

Nursing ADN - Transition (Table 44) has substantial numbers of enrollees though these numbers are dropping slightly. While the number of graduates is still high, it is also dropping. A.S. declarations have declined by 26% since 1985. Intensive efforts at recruitment are currently occurring for this program. Targeted recruitment populations are those with clinical experience in related medical fields. Placement rates have been above criterion for all five years.

Table 45, Nursing Education Enhancement Studies is a new program and has no placement data.

Office Technology (Table 46) was comprised of a number of separate secretarial science programs that were consolidated in 1984-85. This administrative act is reflected by a boost of enrollments shown for that year. As an official program, Office Systems Technology came into being in

the winter term of 1985. The 1985-86 enrollee figure represents more realistic enrollments of this new program. Since then, Office Technology has become firmly established. Enrollments are steadily increasing. The number of graduates is also growing. Placement rates have been above standard each and every year. The potential pool in A.S. student declaration reflects the state of transition for the earliest years shown.

Pharmacy Technician (Table 47) is the second of two Planned Certificate programs appearing in this report. Along with A.S. programs, it too, is under state mandated monitoring. Though the absolute numbers of enrollees and graduates are small, the proportion of enrollees and graduates has increased appreciably. Placement rates have been high with the exception of the one year dominated by a large percent in the unknown status category.

Physical Therapist Assistant Technology (Table 48) experienced four years of growth before a drop in enrollments in 1988-89. This has been true also for the number of graduates. The 70% placement criterion was met for all mandated years. Declarations for both the A.S. and A.A. degrees are fairly stable; the A.A. pool is substantial.

Postal Management (Table 49) enrollments have increased slightly in the past two years. There were no graduates in the last two years. The state 70% placement criterion was met in two of three years in which there were completers. The pool of potential students is modest.

Radio and TV Broadcasting Technology (Table 50) is variable for both enrollees and graduates across five years. Fall term student declarations for the A.S. major generally approximate A.A. declarations. In four of five years, the State 70% placement criterion was met.

Radiologic Technology (Table 51) has grown by 59% over the years shown. A mean of 22 people graduate from this program each year. A high ratio of graduates to enrollees (1:3) exists for this program. The 70% placement standard has been met each year.

After a period of declining enrollment, Respiratory Therapy Technology (Table 52) has recovered to its 1984-85 level. A mean of 16 students graduate from this program each year and most are placed in related employment. As with other controlled access programs in which student commitment is well-grounded, the ratio of graduates to enrollees is high (1:4).

The Sign Language Studies program or Interpreter Training for Hearing Impaired, Table 53, has grown in enrollments by 28% over five years. The number of graduates has varied between zero and eight. A.S. declarations approximate program enrollments. There is no A.A. equivalent program. State 70% placement criterion was met in two of five years.

Table 54 gives data for the Travel and Tourism Management program. Since 1987-88, the program has declined in actual annual enrollments but Fall Term declarations for this major remain strong. The relatively high number of graduates in 1986-87 was due to special funding during that period. In two of five years, the placement criterion was met. This field is sensitive to changes in economic conditions and international events.

Vision Care Technology/Opticianry (Table 55) has a mean of 78 enrollments and 29 graduates each year. In 1987-88, 57% of the graduates were continuing education. The placement criterion was met in all years. Both A.A. and A.S. degree declarations have remained steady over the years.
